

Scope of Work

Project Name

Former – Comprehensive Form Building Software

Project Goals and Objectives

Here is a set of goals that the team aims to achieve.

Create a comprehensive form building software

- Creating and Editing Forms, FormFields.
 - FormFields can be of any type
 - They can get initial values from external APIs (Such as list of countries or cities)
- Making Submissions

Integrations

- REST API
- Integrate with external APIs
- Integrate with BI
- Integrate with CRMs

Scope of Work Description

We expect to have a form building service which gives us the ability to automate the process of creating forms, taking submissions and analyzing those submissions. In the next phases of the project we expect to support many external integrations with different existing software. The first phase however is only focused on developing the base architecture to allow such actions in the future.

Project Deliverables

- A Frontend Form Builder Software with Authentication
- API Endpoints for inter-software communications
- Integrations with CRM or Business Information Software

Project Milestones

- M1 – Base FormBuilder Features
 - Create, Edit, or Archive Forms
 - Show view of Form for Submission
 - Take and Handle Submissions
- M2 – External API Integrations
- M3 – RestAPI
- M4 – Data Analysis on Submissions

Communication Plan

- Status of completed tasks are reported regularly.
